I support adoption of cleanup option "G". That is, the cleanup goal and success metric of ending the Fish Consumption Advisory. The EPA must provide a date by which the advisory will be lifted for all persons including breastfeeding women.

The draft plan removes far too little contaminated sediment from the river. I believe that at least 1000 acres of polluted sediment must be removed. Similarly, "storing" contaminants in the river and allowing for "monitored natural recovery" is a recipe for continued pollution and danger to the community.

I firmly believe that those who have liability for the PCBs, PAH, DDT and other toxic and persistent pollutants in the river sediments, must meet their community obligation to do the right thing and conduct a **comprehensive** and **timely** cleanup.
This is our river and we want it back!

Respectfully,
